

AUSTIN BRODERICK MCELROY

Embedded Software Engineer | Rust Firmware | Medical Devices

 <https://austin.engineer>  me@austin.engineer  512-825-6857  Austin, Texas  github.com/amcelroy

EXPERIENCE

Senior Staff Software Engineer - Pictorus / Renesas  10/2024 – Present  Remote – Austin, Texas

- Designed, assembled, and brought up an STM32G474 hardware-in-the-loop test PCB covering UART, I2C, SPI, GPIO, ADC, DAC, CAN, and PWM; integrated it into automated nightly end-to-end testing.
- Led migration of an embedded linear algebra library from heap allocation to static allocation, eliminating allocator dependence and fragmentation risk in long-running `no_std` firmware. Open sourced as [pictorus-rs](#).
- Built and demonstrated a custom `no_std` Rust HAL for an unsupported Renesas MCU in two weeks, covering power, I2C, GPIO, and timers. Open sourced as [ra4m2-hal](#).
- Integrated Rust firmware into customer C and Rust environments, including NuttX/PX4 and FreeRTOS, using static-library interfaces and hands-on hardware debugging.
- Owned a cross-platform Linux CLI for telemetry and OpenOCD firmware updates; improved telemetry bandwidth 4x by replacing JSON with Postcard serialization.
- Led delivery of protocol drivers and code generation for PWM, ADC, DAC, and SPI across STM32, Renesas, and embedded Linux targets in Rust, Python, and TypeScript.

Staff Scientist - BridgeSource Medical  08/2020 – 10/2024  Austin, Texas

- Architected firmware and telemetry software for four medical-device SBIR projects totaling \$8M, using embedded Rust, bare-metal C, and Zephyr RTOS across Cortex-M microcontrollers.
- Implemented real-time acquisition, output, and signal processing up to 1 MHz using DMA, interrupts, timers, and custom SPI, I2C, UART, PWM, GPIO, and CAN interfaces.
- Led a \$250k breath-adaptive nebulizer program through successful Phase I human testing, helping secure \$2.5M in Phase II funding; designed its two-stage boost and three-channel piezo drive electronics.
- Built `no_std` Rust/Embassy firmware for an nRF52840 and a Flutter iOS app over BLE to control haptic shoe orthotics used in a small clinical trial.
- Developed bare-metal TM4C and Zephyr/nRF52840 firmware with inter-processor communication, BLE device firmware updates, and LVGL-guided device workflows.

CEO / Engineering Consultant - RaptorView, LLC

 01/2010 – Present  Austin, Texas

- Designed and brought up a custom ESP32-S3 PCB for a 64x64 RGB [Game of Life matrix](#), including USB-C PD, a 27W buck supply, HUB75 level shifting, and native USB/JTAG; wrote Rust firmware on ESP-IDF and a reusable `no_std` simulation core.
- Developed and released [Historicle.ai](#), a Rust journaling app with local LLM support and extensive automated Rust and front-end test suites. [Available in the macOS App Store](#).
- Designed and fabricated a USB-C powered LED drive circuit, Rust firmware (nRF52840), and React Native iOS app for a BLE controlled, [LED light engine](#).
- Architected multi-threaded C# data acquisition (DAQ) and display GUI software for a vaginal OCT system and supported the system through clinical trial.
- Designed, simulated, laid out, and manufactured a high-voltage flash-lamp circuit for acne treatment; managed the successful FDA 510(k) application (K111937).
- Architected, released, and open sourced a package for OpenCL in LabVIEW for high speed computing. [OpenCLV](#)

ADDITIONAL SKILLS

Embedded Linux

Unit Testing

Integration Testing

Git

CMake

Yocto

KiCad

SPICE

Docker

Schematics

ADDITIONAL EXPERIENCE

Research Scientist - University of Texas – Austin 📅 06/2012 – 05/2020 📍 Austin, Texas

- Designed PCB hardware and wrote firmware for the [UT ABBU project](#), an emergency breathing-assist system developed for hospitals during COVID-19.
- Developed a TensorFlow semantic-segmentation pipeline for OCT using U-Net and autoencoder architectures, resulting in two patents.
- Accelerated OCT phase processing for blood-vessel detection 600x with OpenCL.
- Designed and built custom 400 MHz photodetectors for high-power near-infrared laser systems.
- Led LabVIEW DAQ and OpenCL image-processing development across five OCT platforms, supporting dozens of publications.
- Architected software for the LAMPS 3D printer, integrating FPGA and microcontroller subsystems with high-speed thermal imaging and helping secure Phase II funding.

R&D Engineer - Volcano Corporation 📅 06/2006 – 01/2010 📍 Austin, Texas

- Pioneered GPU computing and optimal hardware and software methods for non-linear re-sampling in real time for OCT.
- Designed differential analog photodetector circuits and filters for OCT frontends up to 100MHz, saving over \$100k.

SELECT PATENTS (3 OF 6)

- Milner, Thomas E, Austin McELROY, Aydin Zahedivash, and Nitesh Katta (Oct. 2023). *Multi-channel orthogonal convolutional neural networks*. US Patent 11,779,220.
- Kemp, Nathaniel J, Austin Broderick McElroy, and Joseph P Piercy (May 2016). *Real time SD-OCT with distributed acquisition and processing*. US Patent 9,347,765.
- Kemp, Nathaniel J, Roman Kuranov, Austin Broderick McElroy, and Thomas E Milner (Nov. 2011). *Apparatus and methods for uniform frequency sample clocking*. US Patent 8,049,900.

SELECT PUBLICATIONS (4 OF 72)

- Katta, Nitesh, Arnold D Estrada, Austin B McElroy, Aleksandra Gruslova, Meagan Oglesby, Andrew G Cabe, Marc D Feldman, RY Declan Fleming, Andrew J Brenner, and Thomas E Milner (2019). “Laser brain cancer surgery in a xenograft model guided by optical coherence tomography”. In: *Theranostics* 9.12, p. 3555.
- Katta, Nitesh, Austin B McElroy, Arnold D Estrada, and Thomas E Milner (2018). “Optical coherence tomography image-guided smart laser knife for surgery”. In: *Lasers in surgery and medicine* 50.3, pp. 202–212.
- Wang, Tianyi, Austin McElroy, David Halaney, Deborah Vela, Edmund Fung, Shafat Hossain, Jennifer Phipps, Bingqing Wang, Biwei Yin, Marc D Feldman, et al. (2015). “Dual-modality fiber-based OCT-TPL imaging system for simultaneous microstructural and molecular analysis of atherosclerotic plaques”. In: *Biomedical optics express* 6.5, pp. 1665–1678.
- Kuranov, Roman V, Austin B McElroy, Nate Kemp, Stepan Baranov, Joe Taber, Marc D Feldman, and Thomas E Milner (2010). “Gas-cell referenced swept source phase sensitive optical coherence tomography”. In: *IEEE Photonics Technology Letters* 22.20, pp. 1524–1526.
